1. Wear of Rails on top OR Head of Rail. The metal from the top of rail flows and forms projections which are known as burns. The causes of such types of wear are: Rails are worn out on top due to abrasion of the rolling wheels over them. The heavy wheel loads are concentrated on very small areas. Impact of heavy loads; Corrosion of metal of rails

Railway engineering - Designing Buildings Wiki - Share your construction industry knowledge. Railways have been an important part of our transport infrastructure since the 19th century, and their development has enabled the use of trains as an effective and efficient means of travel.

~~Railway engineering - Designing Buildings Wiki~~
British Railways Mark 1 is the family designation for the first standardised designs of railway carriages built by British Railways from 1951 until 1974, now used only for charter services on the main lines or on preserved railways. Following nationalisation in 1948, BR had continued to build carriages to the designs of the "Big Four" companies, and the Mark 1 was intended to be the standard carriage design for use across all lines, incorporating the best features of each of the former companies
