The cooling system of a marine engine is armed with an electronic audio alert device simply called a "warning horn". If you hear a shrill high pitch sound coming from under the dash, or from the throttle box while under power, heed the warning, and do not continue operation of motor. You should also test the function of the warning horn ...

Inboard stern drive cooling systems and how they work Most newer marine engines use an enclosed cooling system. This means that there is a small tank on the top of the engine that uses a combination of fresh water and coolant. This fresh water is circulated through the engine and through a heat exchanger. The fresh water, in this system, absorbs the heat of the engine.
