Pathogenesis of chronic obstructive pulmonary disease  
The current paradigm for the pathogenesis of chronic obstructive pulmonary disease is that chronic airflow limitation results from an abnormal inflammatory response to inhaled particles and gases in the lung.

Pathogenesis of Chronic Obstructive Pulmonary Disease ...  
Chronic obstructive pulmonary disease (COPD) is a slowly pro-gressive condition characterized by airflow limitation, which is largely irreversible (1). Cigarette smoking is the main etiologic factor in this condition, far outweighing any of the other risk factors. The pathogenesis of COPD is therefore

Chronic obstructive pulmonary disease (COPD) is characterised by poorly reversible airflow obstruction and an... Pathogenesis. Inflammation is present in the lungs, particularly the small airways, of all people who smoke. This normal... ..

Pathology, pathogenesis, and pathophysiology | The BMJ  
COPD is a type of obstructive lung disease in which chronic, incompletely reversible poor airflow (airflow limitation) and inability to breathe out fully (air trapping) exist. The poor airflow is the result of breakdown of lung tissue (known as emphysema), and small airways disease known as obstructive bronchiolitis.

Chronic obstructive pulmonary disease - Wikipedia

Chronic obstructive pulmonary disease (COPD) is the name for a group of lung conditions that cause breathing difficulties. It includes: emphysema – damage to the air sacs in the lungs; chronic bronchitis – long-term inflammation of the airways; COPD is a common condition that mainly affects middle-aged or older adults who smoke.

Chronic obstructive pulmonary disease (COPD) - NHS  
Overview Chronic obstructive pulmonary disease (COPD) is a chronic inflammatory lung disease that causes obstructed airflow from the lungs. Symptoms include breathing difficulty, cough, mucus (sputum) production and wheezing. It's typically caused by long-term exposure to irritating gases or
