Ghanaian Afropop, dance hall, and reggae singer, Livingstone Eise Satekla, better known by his stage name as Stonebwoy, has pleaded

1940 two scientists, refugees from Nazi Germany, wrote a memorandum which has to prove one of the most significant documents of the twentieth century. In it, they outlined proposals for manufacture of the uranium fuelled 'super bomb'. The paper preppelled Britain into the forefront of research into nuclear weapons and lead, through the collaboration of British and American scientists in the manhattan Project, to the decisive ending of the Second World War. One of the British scientists, William Penney, was chosen to lead the UK's nuclear weapons program after the war and went on to be the first Director of Atomic Weapons Reaser Establishment at Aldermaston. Since then, the name 'Aldermaston' has become synonymous with Britain's nuclear deterrent. This book tells the fascinating story of Aldermaston and the other sites which for half a century have made a unique contribution to the defence of the realm. It's publication is particularly welcome in the year in which AWE Aldermaston marks its fiftieth anniversary

In 1940 two scientists, refugees from Nazi Germany, wrote a memorandum which was to prove one of the most significant documents of the twentieth century. In it, they outlined proposals for manufacture of the uranium fuelled 'super bomb'. The paper propelled Britain into the forefront of research into nuclear weapons and led, through the collaboration of British and American scientists in the Manhattan Project, to the decisive ending of the Second World War. One of those British scientists, William Penney, was chosen to lead the UK's nuclear weapons programme after the war and went on to be the first Director of the Atomic Weapons Research Establishment at Aldermaston. Since then, the name 'Aldermaston' has become synonymous with Britain's nuclear deterrent. This book tells the fascinating story of Aldermaston and other sites which for half of century have made a unique contribution to the defence of the realm. The publication of Keeping The Peace is particularly welcome in the year in which AWE Aldermaston marks its fiftieth anniversary.

In 1962 Dean Acheson famously described Britain as having lost an Empire but not yet found a role. Perhaps nowhere is this more apparent than in the realms of nuclear weapons. An increasingly marginal world power, successive post-war British governments felt that an independent nuclear deterrent was essential if the country was to remain at the top table of world diplomacy. Focusing on a key twenty-year period, this study explores Britain's role in efforts to bring about a nuclear test ban treaty between 1954 and 1973. Taking a broadly chronological approach, it examines the nature of defence planning, the scientific goals that nuclear tests were designed to secure, Anglo-American relationships, the efficacy of British diplomacy and its contribution to arms control and disarmament. A key theme of the study is to show how the UK managed to balance the conflicting pressures created by its determination to remain a credible nuclear power whilst wanting to pursue disarmament objectives, and how these pressures shifted over the period in question. Based on a wealth of primary sources this book opens up the largely ignored subject of the impact of arms control on the UK nuclear weapons programme. Its appraisal of the relationship between the requirements and developments of the UK nuclear weapons programme against international and domestic pressures for a test ban treaty will be of interest to anyone studying post-war British defence and foreign policy, history of science, arms control, disarmament and non-proliferation and international relations. It also provides important background information on current events involving nuclear proliferation and disarmament.

Focusing on a key twenty year period, this study explores Britain's role in efforts to bring about a nuclear test ban treaty between 1954 and 1973. Taking a broadly chronological approach, it examines the nature of defence planning, Anglo-American relationships, the efficacy of British diplomacy and UK contributions to arms control and disarmament. The appraisal of the relationship between the requirements and developments of the UK nuclear weapons programme against the countervailing international and domestic pressures for a test ban treaty will be of interest to anyone studying post-war British defence and foreign policy, history of science, arms control, disarmament and non-proliferation and international relations, or who is looking for background information on current events involving nuclear proliferation and disarmament.

Between 15 June 1968 and 13 May 1996, the Polaris submarines of the 10th Submarine Squadron carried out a total of 229 patrols, travelling over 2 million miles. Wherever you sit on the nuclear debate, it makes an impressive tale; delivered on time and on budget essentially by a small group of naval officers and civil servants, the Polaris programme ensured that Britain had a Continuous at Sea Deterrence for twenty-eight years. Polaris is not just the history of the weapons, submarines and politicians: it is the history of those who were there. Combining through history with personal memories and photographs, Keith Hall has created a long-lasting legacy to a fascinating project and provided an insight into a world that no longer exists.

As Britain and the United States commemorate five decades of the special nuclear relationship embodied in the 1958 Mutual Defense Agreement (MDA), two leading research institutes—one on either side of the Atlantic—have collaborated to examine that history. The Center for Strategic and International Studies, in Washington, D.C., and the Royal Institute of International Affairs, Chatham House, London, enlisted senior officials, scientists, academics, and members of industry who have been involved in the implementation of the MDA over the years. The contributors were asked to recount how the U.S.-UK nuclear relationship flourished despite such obstacles as the halt in the scientific cooperation that had spurred the Manhattan Project; the Suez crisis; and sharp disagreements over scientific, political, and technical issues. They were also asked to look to the future of this unparalleled transatlantic relationship. Abstracts from 36 oral histories (taken with, among others, Des Browne, UK secretary of state for defence; James Schlesinger, former U.S. secretary of energy; and Harold Brown, former U.S. secretary of defense) add to the historical dimension of this work. The resulting collection of histories, analyses, and anecdotes provides valuable reading for an understanding of how the two nations were drawn together by a common threat during a turbulent era, as well as how they will face future challenges in a radically changed security environment.

The year 1982 was a desperate time for the U.S. defense community. The United States had no effective system to protect itself completely from a Soviet attack with nuclear-armed intercontinental ballistic missiles, which the Soviet Union possessed in large quantity, and the doomsday philosophy of mutually assured destruction seemed inescapable. But people in the Reagan administration, including Reagan himself, were not content with what they viewed as a morally unacceptable status quo. Then Adm. James Watkins, a member of the Joint Chiefs of Staff, asked, "Wouldn't it be better if we could develop a system that would protect, rather than avenge, our people?" With that, the president's commitment to the Strategic Defense Initiative (SDI) became certain. Ultimately, SDI reflected Western political idealism, a powerful ingredient in the struggle to finally conquer the terrors of the Cold War and to allay the threat of nuclear holocaust. The Star Wars Enigma tells this dramatic story.

When Gabrielle West wrote diaries about her war to send to her much missed favorite brother in India she had no idea that a hundred years later they would be of interest to anyone.Soon after the outbreak of the First World War, Vickers daughter Gabrielle joined the Red Cross and worked as a volunteer cook in two army convalescent hospitals. She then secured paid positions in the canteens of the Farnborough Royal Aircraft Factory and then the Woolwich Arsenal, where she watched Zeppelin raids over London during her night shifts. Having failed a mental arithmetic test to drive a horse-drawn bread van for J. Lyons, she was among the first women enrolled in the police and spent the rest of the war looking after the girls in various munitions factories.Gabrielle wrote about and drew what she saw. She had no interest in opinion or politics. She took her bicycle and her dog Rip everywhere and they appear in many of her stories. She had a sharp eye and sometimes a sharp pen.At the end of the war she was simply sent home. She spent the rest of her life caring for relatives. She lived to 100 and never married. The First World War was her big adventure.These days, the reader might feel MIS should worry about those detailed line drawings of the processes in the factories being sent by Royal Mail across the world but a hundred years ago?

David Hartsough knows how to get in the way. He has used his body to block Navy ships headed for Vietnam and trains loaded with munitions on their way to El Salvador and Nicaragua. He has crossed borders to meet “the enemy” in East Berlin, Castro’s Cuba, and present-day Iran. He has marched with mothers confronting a violent regime in Guatemala and stood with refugees threatened by death squads in the Philippines. Waging Peace is a testament to the difference one person can make. Hartsough’s stories inspire, educate, and encourage readers to find ways to work for a more just and peaceful world. Inspired by the examples of Mahatma Gandhi and Martin Luther King Jr., Hartsough has spent his life experimenting with the power of active nonviolence. It is the story of one man’s effort to live as though we were all brothers and sisters. Engaging stories on every page provide a peace activist’s eyewitness account of many of the major historical events of the past sixty years, including the Civil Rights and anti-Vietnam War movements in the United States and the little-known but equally significant nonviolent efforts in the Soviet Union, Kosovo, Palestine, Sri Lanka, and the Philippines. Hartsough’s story demonstrates the power and effectiveness of organized nonviolent action. But Waging Peace is more than one man’s memoir.

In it, they outlined proposals for manufacture of the uranium fuelled 'super bomb'. The paper preppelled Britain into the forefront of research into nuclear weapons and lead, through the collaboration of British and American scientists in the manhattan Project, to the decisive ending of the Second World War. One of the British scientists, William Penney, was chosen to lead the UK's nuclear weapons program after the war and went on to be the first Director of Atomic Weapons Reaser Establishment at Aldermaston. Since then, the name 'Aldermaston' has become synonymous with Britain's nuclear deterrent. This book tells the fascinating story of Aldermaston and the other sites which for half a century have made a unique contribution to the defence of the realm. It's publication is particularly welcome in the year in which AWE Aldermaston marks its fiftieth anniversary

In 1940 two scientists, refugees from Nazi Germany, wrote a memorandum which was to prove one of the most significant documents of the twentieth century. In it, they outlined proposals for manufacture of the uranium fuelled 'super bomb'. The paper propelled Britain into the forefront of research into nuclear weapons and led, through the collaboration of British and American scientists in the Manhattan Project, to the decisive ending of the Second World War. One of those British scientists, William Penney, was chosen to lead the UK's nuclear weapons programme after the war and went on to be the first Director of the Atomic Weapons Research Establishment at Aldermaston. Since then, the name 'Aldermaston' has become synonymous with Britain's nuclear deterrent. This book tells the fascinating story of Aldermaston and other sites which for half of century have made a unique contribution to the defence of the realm. The publication of Keeping The Peace is particularly welcome in the year in which AWE Aldermaston marks its fiftieth anniversary.

In 1962 Dean Acheson famously described Britain as having lost an Empire but not yet found a role. Perhaps nowhere is this more apparent than in the realms of nuclear weapons. An increasingly marginal world power, successive post-war British governments felt that an independent nuclear deterrent was essential if the country was to remain at the top table of world diplomacy. Focusing on a key twenty-year period, this study explores Britain's role in efforts to bring about a nuclear test ban treaty between 1954 and 1973. Taking a broadly chronological approach, it examines the nature of defence planning, the scientific goals that nuclear tests were designed to secure, Anglo-American relationships, the efficacy of British diplomacy and its contribution to arms control and disarmament. A key theme of the study is to show how the UK managed to balance the conflicting pressures created by its determination to remain a credible nuclear power whilst wanting to pursue disarmament objectives, and how these pressures shifted over the period in question. Based on a wealth of primary sources this book opens up the largely ignored subject of the impact of arms control on the UK nuclear weapons programme. Its appraisal of the relationship between the requirements and developments of the UK nuclear weapons programme against international and domestic pressures for a test ban treaty will be of interest to anyone studying post-war British defence and foreign policy, history of science, arms control, disarmament and non-proliferation and international relations. It also provides important background information on current events involving nuclear proliferation and disarmament.

Focusing on a key twenty year period, this study explores Britain's role in efforts to bring about a nuclear test ban treaty between 1954 and 1973. Taking a broadly chronological approach, it examines the nature of defence planning, Anglo-American relationships, the efficacy of British diplomacy and UK contributions to arms control and disarmament. The appraisal of the relationship between the requirements and developments of the UK nuclear weapons programme against the countervailing international and domestic pressures for a test ban treaty will be of interest to anyone studying post-war British defence and foreign policy, history of science, arms control, disarmament and non-proliferation and international relations, or who is looking for background information on current events involving nuclear proliferation and disarmament.
