Often referred to as a workhorse the PzKpfw IV is certainly not a glamorous beast but from North Africa to the Eastern front it was a ubiquitous fixture on the various battlefields of WWII. Using archive and original photographs to lay down a visual time line for this Panzer's development, the book takes a historical overview of this strategically important tank. Description and definition of all the different Ausfs are included both within the introduction and captions. It applies recent findings to the analysis and commentary of the photographs. These include the authors own research into unit specific stowage and factory production differences, which feature for the first time within the context of a monograph looking at the vehicles overall evolution. Information that should be invaluable to both historians and modelers.

The Panzer IV Panzerkampfwagen IV was one the foremost German fighting vehicles of the Second World War, and this volume in the TankCraft series is an ideal introduction to it. With detailed captions, text and illustrations the book tells the story of the technical development of the Panzer IV and the numerous variants that went into production, and it describes how it evolved from an infantry support vehicle to become the backbone of the Panzer units. It was modified and upgunned to face the ever-increasing enemy threat, and it proved to be so diverse and effective that it earned a unique tactical role on the battlefield.A large part of the book showcases available model kits and after market products, complemented by a gallery of beautifully constructed and painted models in various scales. Technical details as well as modifications introduced during production and in the field are also examined in order to provide everything the modeler needs to recreate an accurate representation of the only Panzer that stayed in production throughout the war.

With comprehensive captions and text this superb book tells the story of the production of the Panzer IV to the key battles in Poland, France, North Africa, Italy, Russia and North West Europe. Initially the Panzer IV was designed as an infantry support tank, but soon proved to be so diverse and effective that it earned a unique tactical role on the battlefield.The book shows how the Panzer IV evolved and describes how the Germans carefully utilized all available reserves and resources into building numerous variants that went into production and saw action on the battlefield. It depicts how these formidable tanks were adapted and up-gunned to face the ever increasing enemy threat.Between 1936 and 1945, over 8,000 Panzer IVs were built. For most of the war this tank was a match for its opponents heavy tanks and quickly and effectively demonstrated its superiority on the battlefield.The Panzer IV was the only German tank to remain in production during the war. Its chassis was converted into more models than any other Panzers that entered service. As well as the various prototype projects and command tanks, observation vehicles, ammunition carriers, recovery vehicles, amphibious armored ferry vehicles that saw service, the book will show a multiple of converted anti-tank propelled vehicles.

The eighteenth volume of PeKo Publishing's WWII Photobook Series, Panzer III on the Battlefield 2, has more than a hundred mainly unpublished photographs, published in the highest possible quality. Both the introduction and the captions are bilingual (English / Hungarian).

The Panzerkampfwagen Mk IV proved to be the one constant in Hitler's Panzerwaffe throughout the Second World War - the German equivalent of the American Sherman and the Soviet T-34\). In this companion volume to his best-selling visual histories of the Tiger and Panther tanks, Anthony Tucker-Jones provides a concise account of the Mk IV's design, development and performance in combat. The Mk IV served on every major front, in France, the Balkans, North Africa, the Soviet Union and, at the end of the war, in Germany itself - it was a key weapon in the blitzkrieg attacks launched early in the war and in the later desperate defense of the Reich. Using over 150 rare wartime photographs, plus a selection of specially commissioned color, he describes how the initial design of the Mk IV was modified and refined throughout the course of the conflict to counter the threats posed by ever more formidable Allied tanks and antitank guns on the battlefield. While the Mk IV was never produced in the same numbers as the leading Allied tanks, it was without doubt one of the principal armored vehicles of the Second World War, and Anthony Tucker-Jones's highly illustrated history is the ideal introduction to it.

Unique memoir of a Canadian serving in a German armored division What it was like to fight in a tank on the Eastern Front Details on the battlefield performance of the Panzer IV tank Six months before World War II erupted in 1939, Bruno Friesen was sent to Germany by his father in hopes of a better life. Friesen was drafted into the Wehrmacht three years later and ended up in the 7th Panzer Division. Serving as a gunner in a Panzer IV tank and then a Jagdpanzer IV tank destroyer, Friesen experienced intense combat against the Soviets in Romania, Lithuania, and West Prussia.

The Battle of France in 1940 involved the first large-scale tank-against-tank battles in history. The massive clashes at Stonne, Hannant, and Gembloux involved hundreds of tanks on both sides, yet have faded from memory due to the enormity of the French defeat. This book examines two of the premier opposing tanks of the Wehrmacht and the French Army, the German PzKpfw IV and the French Char B1 bis. With a complete history of the design, development, and deployment of these armoured fighting vehicles, the story of these great battles is once again brought to life.

The Panzerkampfwagen IV was one of the most numerous and successful German tanks of World War II. Despite the introduction of the Panther and Tiger tanks, the PzKpfw IV remained the backbone of the German armoured units until the end of the war. This book details all of the variants of the Panzerkampfwagen IV with the long guns 7.5cm KwK 40 L/43 and L/48. Until 1942 armed with a short 7.5cm KwK L/24, it was used primarily in an infantry support role. However with the upgrading to the long 7.5cm it became the main battle tank of the Panzer Divisions.
