Thank you very much for reading **physical chemical treatment of water and wastewater**. As you may know, people have look hundreds times for their chosen novels like this physical chemical treatment of water and wastewater, but end up in infectious downloads. Rather than reading a good book with a cup of tea in the afternoon, instead they juggled with some malicious virus inside their desktop computer.

Treatment Processes

Contaminated water contains particles of different sizes which can be classified as dissolved ($< 0.08 \mu\text{m}$), colloidal ($0.08 - 1 \mu\text{m}$), supracolloidal ($> 100 - 100 \text{ mm}$) and settleable ($> 100 \mu\text{m}$) (1 and 2). The type of treatment selected depends on the size of particles present in the wastewater.

The substances that are removed during the water treatment process are suspended solids, viruses, fungi, bacteria, algae, and minerals. The process involves both physical and chemical methods. The chemical used in this process are called water treatment chemicals. Common water treatment chemicals

What Are Water Treatment Chemicals | Chemistry Articles

These chemical processes,

which induce chemical reactions, are called chemical unit processes and are used alongside biological and physical cleaning processes to achieve various water standards. Specialized chemicals such as chlorine, hydrogen peroxide, sodium chlorite, and sodium hypochlorite (bleach) act as agents that disinfect, sanitize, and assist in the purification of wastewater at treatment facilities.

Water And Wastewater treatment uses chemical and physical processes to solve specific problems. Screens, strainers and membrane technology, for instance, are employed to separate solids. Processes such as precipitation and nanofiltration remove heavy metals from wastewaters.

Chemical-Physical Wastewater Treatment Technologies | DAS

Water purification is the process of removing undesirable chemicals, biological contaminants, suspended solids, and gases from water. The goal is to produce water fit for specific purposes.

Depending on the wastewater's composition, the process for chemical-physical wastewater treatment comprises several sub-steps. Efficient solutions can often be achieved by combining those different process steps in the right order. Physical-chemical plants are commonly used for industrial effluents purification.

Physical properties for water treatment - Degremont®

Importance of temperature:-
Affects chemical reactions during the wastewater treatment process. Affects aquatic life (Fish,).
Oxygen solubility is less in warm water than cold water.
Optimum temperature for bacterial activity is in the range of 25°C to 35°C. Aerobic digestion and nitrification stop when the temperature rises to 50°C.
